What's New in Version 1.7.x

1. Upgraded the project to Unity 6.0; Upgraded Sentis to InferenceEngine.
2. Upgraded the core stream providers to v1.7. Fixed issues in various sync modes.
3. Updated the background removal demo scenes to detect multiple users.
4. (1.7.1) Fixed bugs that appeared in the latest revisions of Unity 6.x.

What's New in Version 1.6.x

1. Added separate camera-intrinsics provider, to minimize the dependency on body tracking.
2. Added 'Detect multiple users'-setting to UniCam-interface, to optimize single- & multi-user tracking.
3. Updated body detection model in body-stream provider, to provide better multi-user detection.
4. Fixed detection of RaisedRightHorizontalLeftHand & RaisedLeftHorizontalRightHand gestures.
5. Updated 'Computer Vision Examples' to work with Sentis v2.1 (non-breaking changes).
6. (v1.6.1) Updated object stream provider to YOLO-11 neural model.
7. (v1.6.1) Updated webcam device manager, to allow changing webcam or recording at run-time.
8. (v1.6.1) Fixed the restart issue, when the sensors get stopped and restarted via KinectManager.
9. (v1.6.2) Added support for iPhone- & iPad-Pro LiDAR cameras as depth providers.
10. (v1.6.2) Added support for Azure-Kinect and Orbbec Femto Bolt & Mega sensors (on request).
11. (v1.6.3) Cosmetic changes, optimizations and fixes in many components and scenes.

What's New in Version 1.5.x

1. Added WebGL support (too slow, not recommended), as well as WebGPU support.
2. Updated 'Computer Vision Examples' to work with Sentis v1.6 (fixed breaking changes).
3. Fixed object detection, to make correct inferences on Sentis v1.6.
4. Updated depth stream provider to inference in more frames, to increase the overall performance.
5. Updated body stream provider to detect up to 3 users.
6. (v1.5.1) Fixed the breaking changes introduced in Sentis v2.0.

What's New in Version 1.4

1. Added 'Get object frames'-setting to KinectManager, to track objects & object silhouettes.
2. Added background object-image components, as well as 'Object image Sx'-option to 'Display images'-KM setting, to display object silhouettes on screen.
3. Updated multiple-object tracker, to better track users and objects across frames.
4. Updated background components, to allow optional output to a render-texture, as well as to allow setting the opaqueness of the image on-screen (thanks to AR developer Lloyd).
5. Updated BlobDetector-component and blob detection demo scene, to provide blob smoothing across frames (thanks to Max Bennett).

What's New in Version 1.3

1. Updated 'Computer Vision Examples' to work with Sentis v1.4.0.
2. Updated stream providers and UniCam-interface to allow non-synched frames.
3. Updated webcam device manager to allow audio when it plays back a video.
4. Added Keep-last-pose setting to AvatarController, to keep user's last position before losing it.
5. Fixed following of offset-node and applying the muscle limits in AvatarController-component.

What's New in Version 1.2

1. Updated depth model to improve the depth estimation and make it more stable and reliable.
2. Added 'Use lite model'-option to depth stream provider, to allow use of the previous model.
3. Updated scenes and components to work on mobile platforms (still not recommended).
4. Updated the user tracker to work in sync with user region detections.
5. Updates and fixes related to issues in several demo scenes and components.

What's New in Version 1.1

1. Updated Pose-LM stream provider, to improve the body tracking process and make it more stable.
2. Updated user tracker to provide tracking of up to 4 users.
3. Fixed error in SentisManager that could lead to memory leaks.

What's New in Version 1.0

1. This is the first release of 'Computer Vision Examples for Unity'.
